

Anacomp CaseLogistix™

The Speed-Accuracy tradeoff is a common eDiscovery challenge. CaseLogistix™ changes the equation.

Speed and Accuracy sit as foundations supporting the CaseLogistix platform. When comparing documents reviewed per day, CaseLogistix is one of the fastest tools available. Additionally, CaseLogistix provides a more complete view of original documents, with metrics to verify throughput at every workflow stage.

CaseLogistix, Anacomp's flagship litigation support software, enables discovery review teams to quickly organize, review, analyze and produce anything from paper to Electronically Stored Information (ESI). Simply put: Anacomp's CaseLogistix™ review platform reduces the costs and mitigates the risks associated with eDiscovery.

Intuitive & Flexible

CaseLogistix offers intuitive navigation and review features, so the reviewers can focus on review- not training.

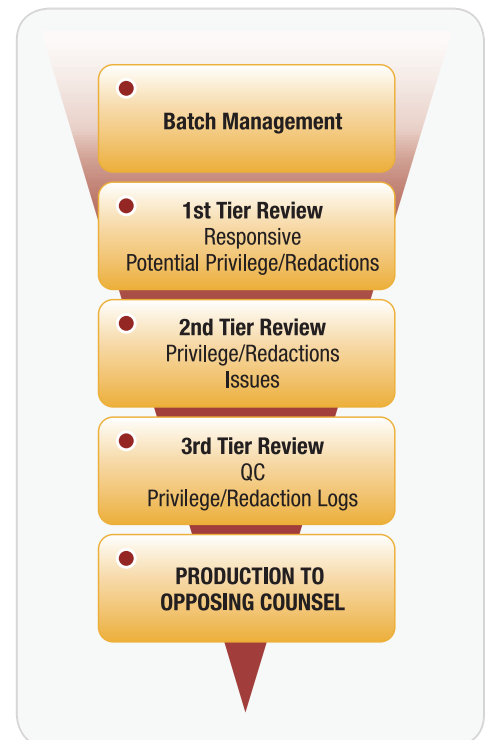

IntelliFolders™ – CaseLogistix automatically groups like documents with similar content. Reviewing documents in context gives you faster and more consistent throughput. You can automatically categorize documents by custodian, dates, issues, or any other criteria. IntelliFolders are limited only by your imagination.

True Native Review – With CaseLogistix, you can review documents in whatever formats you require. Documents are too often viewed exclusively through the lens of 'what it would look like as paper' or as a 'near-native rendering'. CaseLogistix provides options to examine documents in whatever formats(s) best facilitate accurate designations: True native for increasingly necessary native-file productions, near native for obscure/obsolete file types, as well as TIFs and PDFs for a more traditional review and production.

Configurable Workflow – Less time spent managing the process. CaseLogistix is designed to conform to your case, not the other way around.

- Configurable user interface allows users to see only the data, documents, and functionality they need
- Non-linear review capabilities to quickly and more precisely evaluate documents with greater context
- Flexible push/pull methods of distributing work to review teams
- Standard reporting with the flexibility to leverage an open architecture for additional metrics

CaseLogistix allows review teams to create to most efficient processes for their users, projects, and, most importantly, goals.

An example of CaseLogistix workflow with review metrics across the process.

Secure

CaseLogistix offers granular, battle-tested security that is easily managed.

Granular – CaseLogistix lets you control security at the folder, the document, and the field level. It can secure sets of documents to enforce protective orders. It can secure attorney notes and work product to appropriate team members. CaseLogistix fits perfectly with multiple-party litigation like: joint defense or plaintiffs groups, collaborative cost sharing with co-counsel, and controlled access to expert witnesses.

Battle-Tested – CaseLogistix' security is proven across hundreds of cases, thousands of users, and terabytes of data.

Easy to Manage – Changes can be made on-the-fly to meet evolving requirements.

Scalable

In the middle of review, there is no time to worry about whether your litigation support solution can rapidly accommodate scope changes. CaseLogistix is scalable, from a single laptop supporting attorneys in court, to data centers hosting hundreds of reviewers and researchers.

Global

Litigation, like business, doesn't stop at the border. With growing numbers of global litigation, CaseLogistix facilitates the document review in any language:

- Search using Unicode character sets – facilitating rapid, accurate identification regardless of language
- Display text translations side-by-side to original documents for a more efficient review
- Localize menus and dates for global review teams

CaseProduction™

Speed and accuracy don't stop at review. CaseProduction is CaseLogistix' companion production tool. It facilitates high-volume export of data:

Intuitive – Quick, efficient set-up and management of multiple productions

Fast – Consistently handles large-scale productions with less manual intervention

Cost-Effective – Optimize systems and staff with predictable production

Whether On-Premise, Hosted, or a combination of both models, CaseLogistix provides a cost effective review platform – the answer to eDiscovery challenges of 'Speed and Accuracy'.
